

Certified Innovation Professional®

CInP® Question Bank

Answer Key

Answers, rationales, and workbook page references

Prepared by GELLIFY Middle East

Companion to the CInP Question Book

May 2026

Topic & Lesson Index

Topic	Lesson (pages)	# Qs	Question IDs
The Innovation Professional	Lesson 1 (pp. 5-9)	8	Q001–Q008
Fundamentals of Innovation	Lesson 2 (pp. 10-19)	25	Q009–Q033
Three Phases of Innovation	Lesson 3 (pp. 20-23)	5	Q034–Q038
Innovation's Design Outputs	Lesson 4 (pp. 24-31)	13	Q039–Q051
The Effective Innovator	Lesson 5 (pp. 32-59)	15	Q052–Q066
Creativity & Creativity Methods	Lesson 6 (pp. 60-70)	15	Q067–Q081
Ideation & Brainstorming	Lesson 7 (pp. 71-81)	17	Q082–Q098
Oblique Examination	Lesson 8 (pp. 82-103)	11	Q099–Q109
Running Innovation Projects	Lesson 9 (pp. 104-158)	36	Q110–Q145
Research in Innovation	Lesson 10 (pp. 159-214)	38	Q146–Q183
Design Thinking	Lesson 11 (pp. 215-253)	20	Q184–Q203
The Innovation Manager	Lesson 12 (pp. 254-257)	8	Q204–Q211
Core Innovation Teams	Lesson 13 (pp. 258-266)	10	Q212–Q221
Project Leader	Lesson 14 (pp. 267-310)	7	Q222–Q228
Innovation Management Process	Lesson 15 (pp. 311-336)	21	Q229–Q249
Storytelling	Lesson 16 (pp. 337-346)	9	Q250–Q258
Selecting Winning Ideas	Lesson 17 (pp. 347-357)	13	Q259–Q271
Integration	Lesson 18 (pp. 358-362)	2	Q272–Q273
Engagement	Lesson 20 (pp. 367-387)	8	Q274–Q281
Open Innovation	Lesson 21 (pp. 388-400)	11	Q282–Q292
PM Tools	Lesson 22 (pp. 401-410)	8	Q293–Q300

Quick Answer Grid

All 300 answers at a glance - useful for fast self-scoring. Detailed rationales and page refs follow.

Detailed Answer Key

Organized by lesson/topic. Page references point to the CInP Course Workbook V1.5.

Lesson 1 - The Innovation Professional

Workbook scope: pp. 5-9

Q#	Ans	Workbook	Rationale
Q001	C	p. 8	Innovation Professionals develop Commercialization strategies (branding, marketing/sales/distribution channels) for each innovation concept.
Q002	A	p. 6	Innovation Managers serve either as a Project Leader (leads individual innovation projects) or a Program Leader (drives the business' innovation program).
Q003	B	p. 6	Innovation Professionals feed the Innovation Pipeline, which is where projects under active execution sit and flow toward commercialization.
Q004	C	p. 7	Innovation Professionals focus on needs discovery, hypothesis testing, prototyping, business plans, and commercialization - not labor relations.
Q005	C	p. 8	Front End Innovation Team members focus on research, qualification, quantification, and initial definition of opportunities.
Q006	B	p. 8	Mid Zone work involves strategizing, modeling, justification, and defense of the opportunity for approval.
Q007	C	p. 8	Back End work is execution, implementation, and commercialization - design, development, production, delivery, sales, marketing, and service.
Q008	A	p. 8	The Program Leader drives and manages the business' overall Innovation Management process; the Project Leader manages individual projects.

Lesson 2 - Fundamentals of Innovation

Workbook scope: pp. 10-19

Q#	Ans	Workbook	Rationale
Q009	A	p. 13	The four general types of business innovation are Incremental, Breakthrough, Disruptive, and Transformative.
Q010	D	p. 17	The three Scales of Innovation are Mega, Macro, and Micro.
Q011	B	p. 14	Sustaining, Derivative, and Moderate are alternative names used for Incremental Innovation.
Q012	B	p. 14	Radical Innovation is an umbrella term covering Breakthrough, Disruptive, and Transformative Innovation.
Q013	C	p. 13	Disruptive Innovation creates entirely new categories that displace previous ones, often requiring new business models.
Q014	D	p. 13	Transformative Innovation transforms society and how it operates. The Internet is a classic example.
Q015	C	p. 17	Micro Innovation operates at the level of individual projects - needfinding, Design Thinking, individual patents.
Q016	B	p. 17	Macro Innovation operates at the strategic level within business organizations and underlies 'world's most innovative companies'

			rankings.
Q017	B	p. 12	Only executed ideas meet the definition of an innovation. Ideas alone are not innovations until acted upon and delivered.
Q018	B	p. 14	Innovation is relative (not absolute). Something already existing in one market can be an innovation in another market that hasn't encountered it.
Q019	B	p. 11	The third question is whether it is feasible technologically. All three - Human, Business, Technical - must be 'yes'.
Q020	B	p. 11	Business innovation must be profitable to the business - that profit requirement distinguishes business innovation from other forms.
Q021	A	p. 11	The four stakeholders are Markets & Customers; Workers; Investors/Shareholders; and Society at large.
Q022	B	p. 11	Philosophically, innovation is about connecting two things on a deeper and more meaningful level.
Q023	A	p. 11	The real purpose of innovation is to keep the business relevant to its markets in terms of value/experiences delivered, so it can constantly advance its cause and remain resilient to long-term changes.
Q024	B	p. 13	Generation-over-generation iPhone improvements are a classic example of Incremental Innovation - improvements to existing offerings.
Q025	A	p. 13	The Apple Watch is a Breakthrough Innovation - a completely new offering inside an existing category that substantially raised the bar.
Q026	B	p. 13	The iPad disrupting laptop usage is a classic example of Disruptive Innovation - entirely new category displacing the previous one.
Q027	B	p. 13	The Internet is the canonical example of Transformative Innovation - it transformed society and how it operates.
Q028	D	p. 11	The forms listed are business, urban, social, and workplace innovation. Constitutional innovation is not part of the framework.
Q029	B	p. 17	Macro Innovation, operating at the strategic level of businesses, underlies 'world's most innovative companies' rankings.
Q030	B	p. 13	Disruptive Innovation usually requires new business models, while Breakthrough Innovation stays within existing business models and categories.
Q031	C	p. 12	Until executed, an idea remains just an idea/concept. Innovation requires execution.
Q032	A	p. 11	The purpose of a business is to create value for all stakeholders, not merely to make money for shareholders.
Q033	D	p. 13	Transformative Innovation is correctly matched with offerings/experiences that transform society.

Lesson 3 - Three Phases of Innovation

Workbook scope: pp. 20-23

Q#	Ans	Workbook	Rationale
Q034	B	p. 21	The FEI exists to (1) identify the right need/opportunity and (2) generate an optimal solution for the particular problem.

Q035	B	p. 21	The three phases are Front End of Innovation (FEI), Mid Zone of Innovation (MZI), and Back End of Innovation (BEI).
Q036	B	p. 21	FEI is the early phase - research, qualification, quantification, and initial opportunity definition.
Q037	A	p. 22	MZI focuses on strategizing the opportunity, modeling its economics, justifying the investment, and defending the project through phase-gates.
Q038	C	p. 23	BEI is the execution phase - design, development, production, delivery, sales, marketing, and service.

Lesson 4 - Innovation's Design Outputs

Workbook scope: pp. 24-31

Q#	Ans	Workbook	Rationale
Q039	A	p. 28	Brand Innovation builds upon the Brand Promise, Brand Message, and Brand Language.
Q040	B	p. 30	Package Innovation: a new package design that creates perceived new value and aligns with consumer preferences, playing a vital role in brand messaging.
Q041	C	pp. 24-31	Innovation outputs span a wide array - products, services, experiences, business models, processes, etc.
Q042	B	p. 27	Process Innovation creates new or improved internal processes that change how work gets done.
Q043	B	p. 28	Business Model Innovation changes how value is created, delivered, and captured by the business - not just what is sold.
Q044	B	p. 26	Breakthrough Innovation involves new offerings inside existing categories that substantially raise the bar.
Q045	A	p. 29	Experience Innovation reshapes how customers experience an offering across the full lifecycle of considering, buying, using, and retiring it.
Q046	B	p. 30	Marketing Innovation refers to new approaches in how the business markets - new channels, messaging, positioning, and so on.
Q047	A	p. 28	Service Innovation involves new ways of serving customers - often through novel arrangements of existing capabilities.
Q048	D	pp. 24-31	Tax Avoidance Innovation is not a recognized category. The recognized categories include product, process, service, experience, business model, brand, marketing, and customer loyalty innovation.
Q049	C	p. 27	Re-engineering manufacturing steps to reduce defects is Process Innovation - changing how work gets done internally.
Q050	B	p. 31	Customer Loyalty Innovation creates new approaches to building long-term customer commitment and repeat patronage.
Q051	B	p. 28	Pricing models like subscription and freemium reflect Business Model Innovation - changes to how value is captured.

Lesson 5 - The Effective Innovator

Workbook scope: pp. 32-59

Q#	Ans	Workbook	Rationale
Q052	C	p. 33	Innovators are highly curious - that curiosity drives their constant experimentation.
Q053	D	p. 56	Generative activities build innovators' creativity muscles.
Q054	A	p. 36	Limbic-oriented individuals are best suited to the Front End of Innovation, where intuition and exploration dominate.
Q055	C	p. 38	Objectively-oriented individuals are best suited to the Back End of Innovation, where disciplined execution matters most.
Q056	A	p. 36	Brain Dominance is described along a Cerebral-vs-Limbic (left-brain vs right-brain) spectrum.
Q057	B	p. 36	Cerebrally-oriented thinkers excel at analytical, structured, executorial work - the Back End of Innovation.
Q058	A	p. 38	Subjectively-oriented individuals are well-suited to FEI work - exploration, intuition, and discovery.
Q059	C	p. 33	Innovators are characteristically driven by insatiable curiosity - a hunger for new knowledge and experience.
Q060	B	p. 50	Associating - the ability to connect unrelated ideas - is one of the five Discovery Skills (alongside Questioning, Observing, Networking, and Experimenting).
Q061	A	p. 36	The Mid Zone - bridging exploration and execution - benefits from a balanced Cerebral-Limbic profile.
Q062	B	pp. 36-38	Different phases (FEI / MZI / BEI) call for different orientations; balancing types makes the team more effective across phases.
Q063	A	p. 50	These five behaviors are the Discovery Skills that characterize effective innovators.
Q064	B	p. 38	Personality Type for innovation runs on a Subjective-vs-Objective spectrum, mapping to the front-to-back phases of innovation work.
Q065	C	p. 33	Effective innovators are characteristically lifelong learners - broad and continuously expanding their knowledge base.
Q066	A	p. 36	An all-Cerebral team struggles with the imaginative, intuitive front-end exploration that demands Limbic strengths.

Lesson 6 - Creativity & Creativity Methods

Workbook scope: pp. 60-70

Q#	Ans	Workbook	Rationale
Q067	B	p. 65	Six Thinking Hats is de Bono's system for applying Lateral Thinking via six colored hats.
Q068	D	p. 62	More constraints (not fewer) make for better creativity - forcing the mind off habitual solution paths.
Q069	D	p. 67	Warren Berger's A More Beautiful Question is associated with Question-Storming as a creativity method.
Q070	D	p. 68	Michael Schrage's The Innovator's Hypothesis is associated with Hypothesis Testing as a creativity method.

Q071	A	p. 65	Lateral Thinking involves approaching a problem sideways/around it to generate new approaches that vertical (logical/sequential) thinking would miss.
Q072	B	p. 61	Creativity is described as the source of life for innovation - without it there is no innovation.
Q073	A	pp. 64-69	Creativity Methods include Six Thinking Hats, SCAMPER, Mind Mapping, Random Stimulus, and many others designed to stimulate idea flow.
Q074	B	p. 62	Constraints force the mind off obvious solution paths and toward novel approaches - that's why they catalyze creativity.
Q075	A	p. 67	SCAMPER stands for Substitute, Combine, Adapt, Modify, Put to other use, Eliminate, and Reverse.
Q076	B	p. 68	Random Stimulus deliberately injects an unrelated input - a random word, image, or object - to break habitual thinking patterns and spark new connections.
Q077	A	p. 70	Creativity is like a muscle - it strengthens with use and weakens without. Generative activities keep it strong.
Q078	B	p. 65	Six Thinking Hats assigns six distinct thinking modes (White=facts, Red=feelings, Yellow=optimism, Black=caution, Green=creativity, Blue=process) that the group rotates through together.
Q079	B	p. 67	Mind Mapping visually branches related ideas outward from a central concept, exposing connections and adjacencies that linear note-taking would miss.
Q080	B	p. 63	Psychological safety matters because people only share unconventional, half-formed, or risky ideas when they feel safe doing so without judgment.
Q081	A	p. 72	'Wild idea' rules signal that no idea is too far-out - encouraging participants to share what they'd otherwise self-censor.

Lesson 7 - Ideation & Brainstorming

Workbook scope: pp. 71-81

Q#	Ans	Workbook	Rationale
Q082	A	p. 75	The ideal brainstorming group size is 8 to 12 people.
Q083	B	p. 73	'Innoganda' is the misuse of 'brainstorming sessions' for posturing - creating the appearance of being creative without the substance.
Q084	C	p. 77	The Facilitator establishes rules, sets direction, maintains energy, keeps everyone on topic, and ensures the session runs as intended.
Q085	B	p. 72	Ideation is the broad activity of generating ideas. Brainstorming is a specific structured group technique within ideation.
Q086	A	p. 73	Osborn's classical brainstorming rules emphasize quantity over quality (volume drives breakthrough), withholding evaluation, welcoming wild ideas, and building on others' ideas.
Q087	A	p. 73	Withholding judgment during ideation keeps the idea flow alive; criticism in the moment causes the group to self-censor.
Q088	B	p. 74	Clear, well-framed prompts - often 'How might we...' questions - produce far more relevant ideas than vague invitations.

Q089	B	p. 75	Brainwriting has participants write ideas silently and exchange or build on them, reducing groupthink and dominant-voice bias.
Q090	B	p. 73	Building on others' ideas creates combinatorial richness - one person's half-idea becomes another's breakthrough.
Q091	B	p. 74	Poorly framed prompts - either too vague or too restrictive - are a leading cause of underperforming brainstorming sessions.
Q092	B	p. 80	Post-brainstorming, teams typically cluster related ideas (often via Affinity Analysis) and shortlist promising directions for further exploration.
Q093	B	p. 73	Diverse perspectives broaden the idea space - different backgrounds and roles produce different starting points and associations.
Q094	A	p. 75	Anonymization reduces social pressure (hierarchy, peer judgment) and encourages more candid, exploratory contributions.
Q095	B	p. 73	The facilitator manages flow, enforces brainstorming rules (no judgment, build on others, quantity), and ensures every idea is captured.
Q096	B	p. 73	A clear time-box creates productive pressure that focuses the group and prevents the over-deliberation that kills idea flow.
Q097	B	p. 74	'How might we...' frames a problem optimistically (might suggests possibility), invites ownership (we), and opens divergent exploration (how).
Q098	B	p. 76	Groupthink leads to premature convergence on a single approach - suppressing the diversity of thinking that makes brainstorming valuable.

Lesson 8 - Oblique Examination

Workbook scope: pp. 82-103

Q#	Ans	Workbook	Rationale
Q099	D	p. 86	Oblique Examination requires both the customer/market perspective and the business perspective.
Q100	B	p. 100	BrInM Step 5 (Incubation & Selection) builds out select value models via research, compiles a straw-man business plan, and decides what advances.
Q101	C	p. 102	BrInM Step 6 (Realization): complete Mid Zone work and develop a formal business plan for approval of full design/development/commercialization.
Q102	B	p. 84	GInI's Breakthrough Innovation Method centers on Oblique Examination - examining problems from oblique angles to find breakthrough insights.
Q103	A	p. 84	'Oblique' refers to looking at problems from angled perspectives - not the obvious direct view - to surface non-obvious insights.
Q104	B	p. 84	Oblique Examination is designed to surface non-obvious insights - the kind that lead to breakthrough innovation rather than incremental improvement.
Q105	A	p. 85	Examining problems only from the business' own perspective tends to produce incremental innovation - the business sees only what it already understands.
Q106	B	p. 85	Customer-only perspectives may surface needs that aren't commercially viable for the business to serve - that's why dual perspectives matter.

Q107	B	p. 86	Oblique Examination is a synthesis exercise - combining customer/market view with business view to find innovations that are both desirable and viable.
Q108	A	p. 88	Oblique Examination's discipline of dual perspectives consistently surfaces breakthrough/disruptive opportunities competitors miss.
Q109	A	p. 88	Oblique Examination is most useful in the Front End, where opportunity exploration is happening and dual perspectives can reshape the problem statement.

Lesson 9 - Running Innovation Projects

Workbook scope: pp. 104-158

Q#	Ans	Workbook	Rationale
Q110	B	p. 121	Validating/scoping in the FEI ensures each opportunity makes strategic and financial sense for the business to continue pursuing.
Q111	A	p. 130	Team composition between FEI and MZI depends on organizational structures, executional priorities, and available resources.
Q112	C	p. 135	Teams typically use a Pitch Deck to support the MZI pitch to the Selection Committee.
Q113	C	p. 148	A Minimum Viable Product (MVP) may be used; where brand-erosion risk is high, a more developed version is preferred.
Q114	B	p. 152	Making post-pilot go-forward recommendations requires the team to be very objective.
Q115	C	p. 124	Stress-testing at each stage validates that the problem, solution, offering, and strategy are real and viable.
Q116	B	p. 122	'Fail fast/fail early' redirects resources from weak charters to stronger opportunities - failure-as-learning is the win.
Q117	C	p. 144	Finalizing the development plan in BEI details all research/technical/operational/commercial steps with timeline and budget.
Q118	B	p. 112	FEI's output is an articulated opportunity - a validated problem and a candidate solution direction - to be carried into MZI.
Q119	B	p. 112	FEI begins with identifying an unmet, ill-met, or emerging need - that need is the seed of the opportunity.
Q120	B	p. 120	A team's Point of View is its distilled understanding of the real problem to solve - informed by hypothesis-testing in the Front End.
Q121	A	p. 120	Design Principles define the constraints and qualities the solution must satisfy - they guide ideation toward solutions that fit the problem.
Q122	B	p. 120	FEI's discipline is to establish the Point of View and Design Principles before ideating solutions - to avoid solving the wrong problem.
Q123	B	p. 121	Early financial analysis answers whether the problem is worth solving - does the opportunity warrant continued investment?
Q124	B	p. 128	FEI culminates in a phase-gate milestone review with a go / pivot / no-go decision.
Q125	B	p. 130	MZI produces the formal business case/plan, go-to-market strategy, and

			detailed business model - the documents needed to win full execution funding.
Q126	A	p. 132	A standard MZI step is developing the detailed go-to-market strategy - covering channels, pricing, positioning, and rollout sequence.
Q127	B	p. 135	MZI involves additional phase-gate milestone reviews with go / pivot / no-go decisions.
Q128	B	p. 142	BEI covers the formal design, development, validation testing, piloting, and commercialization of the new offering.
Q129	B	p. 144	A core BEI step is developing hard offering criteria - functional, aesthetic, experiential, brand, and financial.
Q130	B	p. 148	BEI pilots validate the offering and its commercial readiness at a controlled scale before full launch.
Q131	A	p. 152	Post-commercialization monitoring typically runs 3+ years post-launch to ensure outcomes meet planned expectations.
Q132	B	p. 152	Post-commercialization, teams feed lessons learned back into the innovation process - closing the loop for organizational learning.
Q133	B	p. 110	Phase-gate reviews assess progress against pre-established criteria and produce go / pivot / no-go decisions.
Q134	B	p. 408	Failing phase-gate criteria typically leads to redefinition, combination with another project, or termination - but the team is not punished personally.
Q135	B	p. 124	Before prototyping in FEI, teams develop a test plan that mirrors realistic usage of solutions against the Point of View and design constraints.
Q136	B	p. 122	Business experiments in FEI test problem-statement hypotheses, allowing the team to converge on the most accurate problem framing.
Q137	B	p. 126	The final solution statement captures the team's chosen path forward, sometimes a hybrid of tested solutions, based on the test findings.
Q138	B	p. 110	Iteration is built into the model - findings often demand revisiting earlier steps. The process is explicitly non-linear.
Q139	B	p. 130	Team transition between phases is a function of organizational structures, executional priorities, and available resources - not a fixed rule.
Q140	B	p. 350	Confidence in early FEI metrics is inherently low - there will be a degree of subjectivity and judgment at this stage that cannot be eliminated.
Q141	B	p. 148	An MVP is a minimum viable product - a basic version used in some BEI pilots (especially where brand-erosion risk is low).
Q142	B	p. 148	Where brand erosion risk is high, teams prefer a more well-developed pilot version to protect the brand from a poor first impression.
Q143	B	p. 156	Quality of insights and discipline in testing them - not budget or speed alone - distinguish successful innovation projects.
Q144	B	p. 168	Compensatory behaviors - the workarounds customers improvise - reveal unmet needs and signal new innovation opportunities.
Q145	A	p. 122	FEI's diverge-to-converge transition runs via business experiments to test hypotheses and select the most accurate.

Lesson 10 - Research in Innovation

Q#	Ans	Workbook	Rationale
Q146	A	p. 163	Research patterns yield strong signals (the obvious) and weak signals (the non-obvious - fodder for breakthrough innovation).
Q147	D	p. 171	Design Research is the anthropometric aspect of innovation - focused on human-machine interaction details.
Q148	D	p. 177	Market Research arose because producers needed to understand all of these - what consumers wanted, why they preferred options, and their underlying needs.
Q149	D	p. 176	Market Research studies markets in the aggregate.
Q150	B	p. 188	Trend Scouting is the active variant - going out to seek specific trends - distinct from passive Trend Watching.
Q151	C	p. 198	Futurists who augment their work with predictive algorithms are known as Quantitative Futurists.
Q152	B	p. 205	Any new opportunity must align with what the business is capable of pursuing and delivering.
Q153	A	p. 207	Market-driven businesses use Technology Scouting to find new technology that raises the bar on value delivered to their market.
Q154	A	p. 210	Listening Post intelligence is disseminated throughout the business for responsive strategic planning.
Q155	C	p. 192	Trendcasting is highly speculative - complex interactions between PESTEL forces make any extrapolation potentially errant.
Q156	B	p. 182	Brand Tracking tracks the impact of advertising placements on front-of-mind brand recall.
Q157	B	p. 182	Social Media Listening parses large volumes of discussions to identify emerging patterns around brands - often paired with Sentiment Analysis.
Q158	B	p. 179	Fieldwork captures real-time, in-context reactions - typically video-recorded so a wider team can collectively develop insights from playback.
Q159	A	p. 181	Quant surveys can test customer resonance with a new value proposition - so long as the proposition is clearly explained to respondents.
Q160	B	p. 168	Needfinding discovers new opportunities representing real problems worth solving for the business and its markets.
Q161	C	pp. 199-200	Innovation Hunting Grounds balance strategic alignment with business goals and opportunistic exploration of white space.
Q162	C	p. 187	Trend Watching reports trends that have already emerged - not what is genuinely new - so it can't be mistaken for a crystal ball.
Q163	C	p. 210	Listening Posts are special insights-gathering offices set up in strategically important urban centers to stay abreast of happenings and trends.
Q164	B	p. 202	Opportunity Analysis considers how the world is changing around a business and how those changes impact its business model - to shape future strategy.
Q165	C	p. 209	Acquisition Scouting identifies mature/established businesses (not startups) for potential acquisition or merger of strategic value.

Q166	A	p. 168	User Research is the anthropological aspect - concerned with users' collective behaviors and psychology.
Q167	B	p. 165	Primary Research is research the business itself undertakes, customized to a specific insight it requires.
Q168	A	p. 165	Secondary Research is research conducted by another party (syndicated firms, trade associations, publishers) that the business accesses.
Q169	B	p. 165	Secondary Research is preferred when available because it is far more cost-effective than commissioning new Primary Research.
Q170	B	p. 170	Thick Data - coined by Tricia Wang - is high-quality qualitative data that adds the context and meaning Big Data alone cannot provide.
Q171	A	p. 168	User Research methods include Business Ethnography, Contextual Inquiry, Simulated User Scenarios, and Focus Groups.
Q172	C	p. 172	Design Research methods include UX Studies, HMI Studies, Ergonomics & Human Factors Studies, and Customer Experience Studies.
Q173	A	p. 189	PESTEL = Political, Economic, Societal, Technological, Environmental, Legal.
Q174	A	p. 186	Together these methods create Strategic Foresight - the business' ability to anticipate and prepare for what's coming.
Q175	B	p. 192	A Megatrend is a massive, sweeping world trend that substantially influences smaller trends standing in its path.
Q176	B	p. 194	Scenario Planning lays out multiple potential futures and assesses what each could mean for the business - perspective-expanding rather than predictive.
Q177	A	p. 196	Stress Testing tests competing strategies against the future scenarios produced by Scenario Planning - that's why Scenario Planning is the prerequisite.
Q178	B	p. 200	Hard Research encompasses Technology R&D (the foundation of Technology Development) and IP Research.
Q179	A	p. 200	Hard Research is conducted by Scientists and Engineers, who provide the 'how' for pursuing new innovations.
Q180	B	p. 180	A 3,000-respondent online survey targeting statistical significance is Quantitative Market Research.
Q181	A	p. 168	Focus Groups fall under User Research - gatherings of users to discuss perceptions, likes/dislikes, and experiences.
Q182	B	p. 168	Focus Groups are limited by participants' past-only context, groupthink, and social pressure biases.
Q183	B	p. 187	Trend Watching only reads the present - it is not predictive. Don't mistake it for a crystal ball.

Lesson 11 - Design Thinking

Workbook scope: pp. 215-253

Q#	Ans	Workbook	Rationale
Q184	D	p. 217	Design Thinking is powerful because it produces solutions that resonate with users.

Q185	C	p. 231	Step 1 of Design Thinking names the problem around an unmet need or outcome.
Q186	B	p. 236	'Ideate' is a divergent activity - expanding the solution space before convergent testing.
Q187	D	p. 240	In Design Thinking, prototyping must permeate everything we do.
Q188	C	p. 224	Design Thinking's undergirding philosophy is Human-Centered Design (HCD) - placing the human user at the center.
Q189	B	p. 230	The Double-Diamond model was originally conceived by the British Design Council in 2005.
Q190	C	p. 230	The Design Thinking process has 9 action steps - stages 1, 3, and 5 have 1 action each; stages 2 and 4 (the diamonds) have 3 actions each.
Q191	B	p. 232	Step 2 begins by diverging - formulating as many plausible hypotheses as possible about the true nature of the problem.
Q192	B	p. 232	Convergence in step 2 happens via business experiments that test the hypotheses and isolate the most accurate one.
Q193	B	p. 226	Most problems as first encountered are ill-framed. Reframing produces a problem statement at the correct level of human need.
Q194	B	p. 228	The elevator example reframes 'too slow' into 'the wait feels unproductive,' solved by mirrors, music, and hand sanitizer.
Q195	B	p. 224	Empathy in Design Thinking is deep immersion in the user's situation - seeing the world through their eyes.
Q196	B	p. 222	Design Thinking was developed at Stanford University (largely by Professor Rolf Faste), and David Kelley adapted it to business with IDEO in 1991.
Q197	A	p. 240	The 12 purposes include Build to Learn, Build to Empathize, Build to Clarify, Build to Think, Build to Engage, Build to Collaborate, Build to Communicate, Build to Compare, Build to Iterate, Build to Decide, Build to Prove, Build to Inspire.
Q198	B	p. 240	Build to Empathize prototypes help the team understand the customer's world - sometimes by replicating things observed in the field to 'live in them' themselves.
Q199	B	p. 244	'Wizard of Oz' prototypes fake an aspect of functionality so the team can test the value of that feature before investing in real production.
Q200	A	p. 244	Appearance / 'Looks-Like' prototypes simulate the appearance of an item without full functionality - used to gather input on aesthetics and perception.
Q201	A	p. 244	Functional / 'Works-Like' prototypes provide the full functionality of a real system, even if they don't look like the final product.
Q202	B	p. 243	Paper Prototypes are quick, low-cost, no-risk tools that let teams collectively explore and evaluate concepts.
Q203	B	p. 250	Fidelity should match the team's current need - low early when exploring, higher late when validating.

Lesson 12 - The Innovation Manager

Workbook scope: pp. 254-257

Q#	Ans	Workbook	Rationale
Q204	A	p. 255	An Innovation Manager serves either as Innovation Project Leader or Innovation Program Leader.
Q205	B	p. 254	Innovation Managers are the first line of leadership driving the innovation program forward.
Q206	A	p. 255	Project Leaders focus on driving specific innovation projects through FEI/MZI/BEI; Program Leaders drive the overall program.
Q207	B	p. 256	Program Leader Task 1 (engagement) calls for a resourceful, enthusiastic, cheerleading style - driving broad participation.
Q208	A	p. 256	Program Leader Task 2 calls for open-mindedness, diplomacy, business acumen, objectivity, upward influence, detail-orientation, organizing, and networking.
Q209	B	p. 256	Project Leaders must evangelize the project across the business - including to individuals higher in the organization - to secure the support and resources it needs.
Q210	B	p. 255	Innovation Managers may oscillate between the two roles as business needs shift - for example, leading a project for a phase, then stepping into program work.
Q211	B	p. 256	Effective Project Leaders have participated in numerous past innovation projects - they know the process and cycle well.

Lesson 13 - Core Innovation Teams

Workbook scope: pp. 258-266

Q#	Ans	Workbook	Rationale
Q212	D	p. 261	Good Innovation Teams balance brain-dominance patterns, personality types, discovery skills, and hard innovation skills.
Q213	C	p. 258	Core Innovation Teams most often focus on Breakthrough and Disruptive innovation (Horizon 2/3).
Q214	B	p. 258	The fourth role is an Innovation Manager - typically the team leader.
Q215	B	p. 260	Core Innovation Teams are best kept small - typically 6 to 7 members at max - to remain agile and creative.
Q216	B	p. 258	Core Innovation Teams typically take on one project at a time to maintain focus and drive it to fruition.
Q217	A	p. 259	Periphery roles include Innovation Facilitators, Innovation Mentors, and Innovation Mavericks - moving between teams like internal consultants.
Q218	B	p. 260	Micro-managing kills creativity and degrades the team's work - which is why these teams need latitude and autonomy.
Q219	B	p. 260	Effective Core Innovation Teams blend dreamers, designers, strategists, and doers - across the imagination-to-execution spectrum.
Q220	A	p. 259	Core Innovation Teams can sit in a centralized innovation function - or within specific functional groups or business units, depending on structure.
Q221	B	p. 260	Effective Core Innovation Teams are 'rare breeds' - a deliberate mix of styles, with some true mavericks among them.

Lesson 14 - Project Leader

Workbook scope: pp. 267-310

Q#	Ans	Workbook	Rationale
Q222	B	p. 286	The Plan of Attack captures the project's high-level approach across customer relationships, markets, speed, technology leaps, and innovation types/scopes.
Q223	B	p. 269	Integrative / Associative thinkers - who insatiably want to understand how all parts and pieces fit together - make some of the best Project Leaders.
Q224	B	p. 278	New programs need early wins. Project Leaders/teams typically start with simple Horizon 1 projects to build a track record.
Q225	B	p. 268	Tactically, Project Leaders lead the team through the project's many phase-gate milestone reviews.
Q226	B	p. 268	Strategically, Project Leaders play 'evangelist' - selling the project across the business at all levels.
Q227	B	p. 269	The team typically evolves over the course of the project as different phases (FEI/MZI/BEI) demand different capabilities.
Q228	B	p. 268	A built-up network underpins the upward influence and cross-functional alignment Project Leaders need to advance the project.

Lesson 15 - Innovation Management Process

Workbook scope: pp. 311-336

Q#	Ans	Workbook	Rationale
Q229	D	p. 315	The Funnel and Pipeline can involve new offerings, new business models, and new markets.
Q230	B	p. 313	InM drives engagement for participatory innovation, then collects/evaluates/selects the resulting ideas and opportunities.
Q231	D	p. 322	Stage 1 (Strategy) establishes the Portfolio's size, shape, and speed.
Q232	A	p. 329	Affinity Analysis is the popular clustering method used in InM to aggregate related ideas.
Q233	B	p. 325	Structured idea management platforms enable broad engagement, idea submission, voting, and progression of top ideas - they DON'T replace evaluation/selection.
Q234	B	p. 332	Pilots provide commercial validation of a concept before full-scale investment.
Q235	C	p. 332	A drawback of pilots is the potential loss of first-mover advantage if competitors move directly to full market launch.
Q236	C	p. 318	The GInI InMS is a six-stage system: Strategy, Capture, Evaluation, Initiation, Pilot, Scale.
Q237	A	p. 318	The six stages run: Strategy → Capture → Evaluation → Initiation → Pilot → Scale.
Q238	B	p. 320	Stage 4 (Initiation) is typically the longest - projects spend most of their lives in development and refinement here.

Q239	C	p. 320	Stages 5 and 6 are the commercial stages - about commercializing the offering at pilot scale and then full market scale.
Q240	B	p. 322	An Innovation Strategy must be clear/specific AND aligned to the business' broader corporate strategy - both conditions are required.
Q241	B	p. 322	These sources are called Growth Vehicles - each can have its own sub-strategy within the broader Innovation Strategy.
Q242	B	p. 313	Innovation Governance is the broader, higher-level enterprise activity. Innovation Management is the subset focused on engagement and idea throughput.
Q243	A	p. 315	The Continuous Pipeline of Advantage is the constant stream of new business ideas the InM system produces - the engine that keeps the business perpetually relevant.
Q244	B	p. 315	Concept to Customer / Mind to Market refers to the InM program's flow - from new idea through to delivered innovation in the market.
Q245	B	p. 325	The Dragnet (Stage 2 - Capture) is about capturing opportunities, needs, and other new ideas - including via Idea Management software.
Q246	B	p. 327	The Funnel (Stage 3 - Evaluation) evaluates ideas and selects which to pass forward through gates.
Q247	B	p. 329	The Pipeline (Stage 4 - Initiation) is where approved projects, having found a champion, begin execution.
Q248	B	p. 332	The Proving Ground is Stage 5 - Pilot - where the team runs pilot projects on new innovations.
Q249	B	p. 334	The Innovation Payback is Stage 6 - Scale - where the new innovation is scaled into full market offerings to reap the payback.

Lesson 16 - Storytelling

Workbook scope: pp. 337-346

Q#	Ans	Workbook	Rationale
Q250	C	p. 341	Storytelling is the primary medium Innovation Teams use to cast a compelling vision and win buy-in.
Q251	B	p. 341	Stories engage imagination and emotion - making complex information easier to understand and remember (per research).
Q252	A	p. 342	A good story has three components - Action (what the character is doing), Conflict (the obstacles), and Transformation (how the conflict gets resolved).
Q253	A	p. 342	Good story flow: Beginning (introduce the gap dramatically), Middle (vary energy, fill in support), Conclusion (picture the better world, optional call to action).
Q254	B	p. 346	Storytelling is so important it is a skill Team Leaders are instructed to recruit for when building Innovation Teams.
Q255	B	p. 343	Teams can draw directly from an Empathy Map - what the customer thinks/feels/says/does informs the character, conflict, and transformation.
Q256	A	p. 342	Good stories are character-driven - they revolve around a central core

			character (or small group) whose needs and emotions carry the narrative.
Q257	B	p. 342	Character-driven stories convey real human needs and emotions - eliciting the empathy that abstract data alone cannot.
Q258	B	p. 341	Brains are programmed more for stories than for abstract ideas - narrative grabs attention and helps retain complex information longer.

Lesson 17 - Selecting Winning Ideas

Workbook scope: pp. 347-357

Q#	Ans	Workbook	Rationale
Q259	C	p. 351	Level 1 E&S frequency depends on how fast a campaign is running and how many ideas it is generating.
Q260	C	p. 353	The Selection Panel ('Angel Committee') decides which ideas are promoted into the development and commercialization pipeline.
Q261	A	p. 349	The Assimilation Process steps are: Challenging (issue innovation challenges), Accumulating (collect into a database), Aggregating (cluster via Affinity Analysis).
Q262	B	p. 350	Level 1 E&S is conducted by Innovation Managers - they vet the broad cohort and cull it down for executive review.
Q263	C	p. 350	Level 2 E&S is conducted by executives from across the business - they have the authority to fund and resource projects.
Q264	A	p. 350	Together, Level 1 and Level 2 E&S teams are the business' Pipeline Gatekeepers.
Q265	A	p. 350	Level 1 is sometimes called the Evaluation Group; Level 2 is sometimes called the Selection Panel.
Q266	A	p. 353	Conversion is the act of promoting a new idea into the formal Innovation Pipeline.
Q267	A	p. 353	Because new ideas are 'pitched' to the Selection Panel, the process is sometimes called the 'Angel Pitch' and the panel the 'Angel Committee.'
Q268	A	p. 354	Approved projects typically need a Project Initiation Champion - often a Director - to ensure they get attention and resources to survive.
Q269	B	p. 351	Rejected ideas go into a parking lot that gets revisited periodically (e.g., yearly) - sometimes the time wasn't right but later becomes right.
Q270	B	p. 349	Innovation Challenges drive focused ideation around a specific challenge, raising the quality of inputs.
Q271	B	p. 349	Aggregating means clustering similar ideas (via Affinity Analysis) to reduce duplication and create coherent themes for evaluation.

Lesson 18 - Integration

Workbook scope: pp. 358-362

Q#	Ans	Workbook	Rationale
Q272	C	p. 358	Step 1 of Integration: understanding the business' Innovation Strategy - it steers everything that follows.

Q273	B	p. 359	Integration Step 2 (Needfinding): hunt for unmet and unarticulated needs, unresolved pain points, and future trends.
-------------	----------	--------	--

Lesson 20 - Engagement

Workbook scope: pp. 367-387

Q#	Ans	Workbook	Rationale
Q274	B	p. 370	Engagement is aimed at identifying new needs and innovation opportunities the business can pursue.
Q275	D	p. 380	Variety in Mechanisms of Engagement feeds multiple program areas and drives a wide range of outcomes.
Q276	C	p. 382	Incentives, Rewards, and Recognition are the reinforcement mechanisms.
Q277	B	p. 386	The Program Leader monitors and drives the level of bottom-up engagement needed for long-run success.
Q278	B	p. 370	Mechanisms of Engagement span grassroots events, campaigns, innovation challenges, and idea drives - typically outside normal day-to-day work.
Q279	A	p. 369	Engagement work calls for a resourceful, enthusiastic, cheerleading style - building energy across the organization.
Q280	B	p. 382	Recognition reinforces participatory behavior and signals across the organization that innovation work is visible and valued.
Q281	B	p. 385	Sustained engagement feeds the InM system with a constant flow of needs, ideas, and opportunities - the lifeblood of the innovation pipeline.

Lesson 21 - Open Innovation

Workbook scope: pp. 388-400

Q#	Ans	Workbook	Rationale
Q282	A	p. 388	Open Innovation taps into the broader universe of technologies and capabilities outside partners can bring.
Q283	D	p. 395	Crowdsourcing is referred to as availing the business to 'the wisdom of the crowd.'
Q284	D	p. 398	NineSigma is a platform for Curated Open Innovation Partnerships.
Q285	B	p. 388	The Innovation Manager as Liaison is the role responsible for cultivating external partnerships and Open Innovation activities.
Q286	A	p. 392	Inbound Open Innovation pulls external innovations into the business' pipeline - via tech scouting, partnerships, licensing-in, acquisitions.
Q287	B	p. 392	Outbound Open Innovation pushes the business' own innovations outward - out-licensing, spin-offs, partner channels.
Q288	B	p. 388	Open Innovation accelerates the new innovations the business can bring to market - letting it leapfrog competitors.
Q289	B	p. 396	Crowdsourcing is most useful when the business wants to draw on a broad external community - for ideas, problem-solving, or contributions it can't readily source internally.

Q290	B	p. 397	Prize challenges motivate broad external participation to compete on solving a specific challenge - pulling in solutions the business couldn't have found alone.
Q291	A	p. 388	Open Innovation, done well, can let the business leapfrog competitors by accessing external capabilities it doesn't have internally.
Q292	A	p. 400	A key risk of Open Innovation is the complexity of managing IP and confidentiality across multiple external parties.

Lesson 22 - PM Tools

Workbook scope: pp. 401-410

Q#	Ans	Workbook	Rationale
Q293	C	p. 402	The most common tools are: Idea Management SW, Portfolio Management SW, PLM SW, Product Roadmapping, and Phase-Gate Project Management.
Q294	B	p. 406	Product Roadmapping plans successive generations of a product line - used for incremental innovation.
Q295	B	p. 408	Failing phase-gate criteria, the project is either redefined, combined with another, or terminated.
Q296	B	p. 403	Idea Management SW captures, catalogs, and manages incoming new ideas - the digital backbone of the Dragnet stage.
Q297	B	p. 405	Portfolio Management SW tracks the mix of innovation projects against the Innovation Strategy - keeping the portfolio aligned to size, shape, and speed.
Q298	B	p. 406	PLM SW manages product data and engineering changes across the product's lifecycle - heavily used in BEI and post-launch.
Q299	B	p. 408	Phase-Gate uses structured reviews at defined milestones with go / pivot / no-go criteria - disciplining innovation projects against pre-established gates.
Q300	B	p. 401	Each tool addresses a different stage of the InM system - together they form an end-to-end toolkit for managing innovation.
